

Анализ публикационной активности ученых НИУ «БелГУ» в журналах, входящих базы данных Scopus за 2012 г.

На начало апреля в базе данных Scopus насчитывалось 116 публикаций ученых НИУ “БелГУ”. Все они приведены в Приложении 1. Так как значительная часть скопусовских публикаций входит в базу данных Web of Science (WoS), то на основе Journal Citation Report (JCR), мы привели для этих публикаций данные по импакт –факторам соответствующих им журналам (выделены красным цветом). Для чисто скопусовских публикаций с платформы SCIMAGO были взяты значения SJR (SCIMAGO Journal Rank –импакт фактор, ограничивающий самоцитирование 30 % и учитывающий весомость журналов с которых идет цитирование) и IF = Docs / 2 years (стандартный гарфильдский импакт-фактор, соответствующий таковому в JCR). Известно, что для больших статистических выборок значения скопусовского импакт-фактора на 10 – 15 % превышают таковые для тех же журналов, входящих одновременно и в базу данных WoS. Это связано с тем, что база данных Scopus в два раза больше, чем база данных WoS. В то же время для нашей небольшой выборки эта закономерность не проявляется.

Все 116 публикаций мы распределили по 51 журналу, в которых публиковались ученые НИУ “БелГУ” в 2012 г. (табл.1), а так же построили распределения количества журналов в зависимости от интервала изменения значений скопусовского импакт-фактора журналов (табл.2). Из последней таблицы видим, что львиная доля журналов соответствует низкоимпактной области, а всплеск количества журналов в интервале $2,0 < \text{IF} < 3,0$ связан с публикацией восьми статей в одном и том же голландском материаловедческом журнале (табл.1). То есть здесь на кривой распределения мы имеем случайный статистический выброс. В табл.3 приведено распределение публикаций по профилям журналов, из которого видим, что 81 % статей опубликовано в материаловедческих и физических

журналах, а доля последних журналов в их общем количестве составила 65%.

Распределение публикаций по количеству авторов приведено в табл.4. Из не видим, что около 22 % публикаций приходилось на статьи без соавторства и с одним соавтором (25 статей). В целом, большие коллективы авторов публикаций соответствуют тому, что большинство публикаций ученых НИУ “БелГУ” связано с проведением экспериментальных исследований в физических областях. Доля статей с международным соавторством (с учеными из стран Дальнего Зарубежья) составила всего 13 % (около 15 статей).

В Приложении 2 мы привели таблицы и соответствующие им диаграммы структурных характеристик, которые мы сгенеририровали на платформе Scopus для общего количества публикаций ученых НИУ “БелГУ”. Их целесообразно сопоставлять с публикационными структурами 2012 года. Например, в общем количестве скопусовских публикаций ученых НИУ “БелГУ” за все годы 71 % (910 публикаций) приходятся на предметные области: физика, астрономия, материаловедение, технические науки, а в первую пятерку журналов входят исключительно журналы по физике и материаловедению. Это говорит о том, что на протяжении десяти лет, в течение которых вуз работает в статусе классического университета не произошло каких -либо структурных сдвигов. Без таких сдвигов перспективы дальнейшего развития университета, в контексте наращивания его публикационной активности практически, отсутствуют. В идеале необходимо иметь по несколько лидеров в двух остальных приоритетных областях исследований – науки о жизни и биотехнологии, компьютерные науки и информационно-коммуникационные технологии, как это удалось достигнуть по первому приоритетному направлению – нанонауки и нанотехнологии.

**Таблица 1. Распределение публикаций ученых НИУ “БелГУ”
по журналам (116 публикаций). Scopus, апрель 2012 г.**
