
MEDICAL INSTITUTE

PEDIATRICS

The main goal of the program is to master knowledge in the field of anatomical and physiological features of the child's body at different ages and to acquire skills of physical examination of a child. Students gain knowledge of additional examination methods interpretation (laboratory and functional), treatment prescription (drug and non-drug) depending on the nosology and the disease severity. The student has the opportunity to master modern diagnostic aid and health practices. Students have an access to lecture courses by leading Russian specialists in the field of diagnosis, treatment and prevention of childhood diseases.
